## Investment objective

The Vanguard Ethically Conscious Global Aggregate Bond Index ETF (Hedged) – AUD Hedged seeks to track the return of the Bloomberg Barclays MSCI Global Aggregate SRI Exclusions Float Adjusted Index hedged into Australian dollars before taking into account fees, expenses and tax.

## ETF overview

The ETF provides low cost exposure to high-quality, income-generating securities issued by governments, government-owned entities, government-guaranteed entities, investment-grade corporate issues and securitised assets from around the world. The ETF excludes companies with significant business activities involving fossil fuels, alcohol, tobacco, gambling, military weapons and civilian firearms, nuclear power and adult entertainment.

The investments in the ETF are predominantly rated BBB- or higher by Standard & Poor's or equivalent ratings agency. The ETF is hedged to Australian dollars so the value of the ETF is relatively unaffected by currency fluctuations.

## Notes

- A Past performance is not an indication of future performance.
- B Returns assume reinvestment of all distributions. Returns for periods longer than 1 year are annualised. ETF gross returns are before management fees and taxes, but after transaction and operational costs. ETF total return is the ETF gross return less management fees. Index returns do not allow for taxes, management, transaction and operational costs.
- C Returns assume that an investor purchased units at Net Asset Value (NAV) and does not reflect the transaction costs imposed on the creation and redemptions of ETF Units, brokerage or the bid ask spread that investors pay to buy and sell ETF securities on the Australian Securities Exchange.
- D Past distributions are not an indication of future distributions.

## Glossary

**Weighted average coupon** is the average interest rate (coupon rate) of all the bonds in a fund.

**Weighted average maturity** is the time from today until a bond matures or is redeemed by its issuer. Within a portfolio, the statistic is calculated for each bond and weighted by each bond's market value. In general, the longer a fund's average weighted maturity, the more its unit price will fluctuate in response to changing interest rates.

**Weighted average credit quality** is an indicator of credit risk. This figure is the average credit ratings assigned to a fund's holdings by credit rating agencies. Agencies assign credit ratings after appraising an issuer's ability to meet its obligations. Quality is graded on a scale, with Aaa or AAA indicating the most creditworthy bond issuers.

**Effective duration** is an option-adjusted measure of a portfolio's sensitivity to a change in interest rates. For example, if a bond has a duration of two years, its price would fall about 2% when interest rates rose one percentage point. On the other hand, the bond's price would rise by about 2% when interest rates fell by one percentage point.

**Running yield** for an individual bond is the annual dollar interest payment (coupon) of the bond divided by its market price. Within a portfolio, the statistic is calculated for each bond and weighted by each bond's market value.
